Keeping it green

We take our responsibility to the environment very seriously; for this reason all timber used in the production of this floor covering comes from certified resources, the entire manufacturing process being controlled by the Bolivian Government’s Sustainable Forestry Development Program.

Eco Decking Tiles come in three tile designs and edge detail tiles so you can create custom patterns, which can be changed at any time, or even take them with you when you move home.

Installation couldn’t be more simple. The tiles are laid by aligning the interlocking tabs, just press, click and you’re done. You really can receive, install and enjoy your new hardwood deck all on the same day.

Should it be necessary to cut around posts, corners etc; this is easily achieved with a handsaw or jigsaw cutting through the slats and the base simultaneously. Alternatively should you wish to avoid cutting the tiles to fit within a particular space, simply lay as many whole tiles as possible and fill the remaining gap with decorative pebbles.

Ipe hardwood

Ipe, pronounced EE-pay, is a large tropical hardwood tree that grows abundantly throughout tropical areas in South America. Ipe wood is prized for its durability, strength and its natural resistance to decay. Ipe’s remarkable properties have made it the number one choice for premium commercial and residential decking throughout the USA.

To give an indication of Ipe’s remarkable strength and hardness, if you were to compare it with Teak for instance it is approximately 368% harder and some 40% heavier. It is the timber used on the famous Atlantic City Boardwalk.

Another major benefit of Ipe timber is its natural resistance to the growth of moulds, lichens and mosses - which make other timber exceedingly slippery when wet.

Ipe is also naturally resistant to splinters so children and bare feet are not an issue.

Introducing Eco Decking Tiles®

Eco Decking Tiles, a high quality, multi-award winning product designed to cover any exterior hard surface, quickly and easily transforms it into a hardwood deck. The unique modular tiles couldn’t be easier to use. Each tile is embedded with a weatherproof polypropylene base that allows them to be laid in just a matter of minutes. Eco Decking Tiles offer a quick, stylish, high-quality product to a delightful new surrounding operation. They also offer considerable savings in both time and costs when compared with the installation of conventional decking.

Eco Decking Tiles received a ‘Best New Garden Product’ award at the Grand Court DHI & Garden Show 2006 and ‘Best New Landscaping Product’ at GLE 2006.

Benefits include:
- No fixings, no adhesive, no mess
- Naturally splinter proof
- Naturally slip resistant
- Strong, stable, drip floor
- Weatherproof polypropylene base
- Ecologically certified timber
- 15 Year Manufacturer’s Warranty
- Robust non-slip deck

Perfect for patios, walkways, decking refurbishments; hot tub surrounds; porch and entrance ways. Ideal for use in situations where conventional decking may not be suitable such as balconies and roof terraces.

Eco Decking Tiles have an installed height of just 3cm; this means they can be installed where there is very little clearance between door openings and the existing patio/surface; where to install conventional decking would require the removal or lowering of this surface.

Care & Maintenance
- Left untreated the timber will slowly fade to a graceful silver grey colour and hairline cracks may appear near the endgrain - this will in no way affect the longevity or structural integrity of the timber.
- Should you wish to maintain the new look of the timber, it should be treated with an oil based preservative, preferably one with an effective UV filter such as TimberGuard. Care should always be taken to ensure whatever treatments are applied do not adversely react with any waterproof membranes that may be in situ.

Eco Decking Tiles received a ‘Best New Garden Product’ award at the Earls Court DIY & Garden Show 2006 and ‘Best New Landscaping Product’ at GLEE 2006.

Benefits include:
- No fixings, No adhesives; No mess
- Naturally splinter proof
- Naturally slip resistant
- Strong, stable drip floor
- Weatherproof polypropylene base
- Ecologically certified timber
- 15 Year Manufacturer’s Warranty
- Robust non-slip deck

DIY - instant decking

We take our responsibility to the environment very seriously; for this reason all timber used in the production of our flooring system comes from certified resources, the entire manufacturing process being controlled by the Bolivian Government’s Sustainable Forestry Development Programme.

The timber used in the manufacturing of our products is an extremely important crop for the local economy and a valuable source of income for the local population.

Environmentally friendly

This beautiful, densely grained durable timber is treated naturally, without the use of harmful chemicals or impregnating agents. The environmentally friendly tiles are treated simply with an oil finish, that provides UV protection.

Keeping it green

SUSTAINABILITY CERTIFIED BY:
